

STATES OF MATTER		
SOLID	LIQUID	GAS
Does it keep its shape?	Does it keep its shape?	Does it keep its shape?
Describe its volume.	Describe its volume.	Describe its volume.
What are some real-world examples?	What are some real-world examples?	What are some real-world examples?
<b>DRAW the States of Matter</b> <i>(show individual particles in your drawing)</i>		<b>COMPOSITION OF MATTER</b>
		At 80°F, would water and oxygen be in the same phase?
		Will olive oil and water turn from liquid to gas at the same temperature?
		Can matter in the same phase have different properties?
